EDUCATION

American International University-Bangladesh

CGPA: 3.96/4.0, Dean's List

B.Sc. in Computer Science Engineering

2022-2025

- **Courses:** Data Structures & Algorithms, Object-Oriented Programming, Web Technologies, Database, Object Oriented Analysis & Design, Operating System, Computer Networks, Compiler Design, Machine Learning, Artificial Intelligence, Computer Vision & Pattern Recognition, Natural Language processing, Software Requirement Engineering

Jagannath University

Dhaka, Bangladesh

Bsc in Mathematics

2020-2021

EXPERIENCE

KT Informatik

Nov 2025 - Jan 2026

Software Engineering intern

Dhaka, Bangladesh

- Architected an intelligent ATS utilizing **RAG** (BM25, vector search, and knowledge graphs) to automate candidate ranking and data extraction from large-scale talent pools
- Optimized end-to-end latency by **50%** through **Redis/RabbitMQ** caching and asynchronous workflows and a dual-LLM orchestration, achieving sub-2-second response times
- Engineered a production-ready **Docker** environment for FastAPI, Neo4j, and **PostgreSQL**, resulting in a **60% reduction** in container image size for streamlined deployment

TECHNICAL SKILLS

Frontend Development: React.js, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Responsive Design

Backend & Databases: PHP, Node, GO, MySQL, PostgreSQL, Neo4j, Redis, FastAPI, RESTful APIs

DevOps: Git, GitHub, CI/CD, Docker, Linux, Actions, AWS

Programming & AI/ML: C++, JavaScript, GO, Java, Python (scikit-learn, TensorFlow, PyTorch, pandas, NumPy)

Problem Solving: Solved 300+ algorithmic and coding challenges across multiple platform

Graphic Design & UI/UX: Adobe Photoshop, Adobe Illustrator, Adobe XD, Figma, Canva

Additional Competencies: UI/UX Implementation, Machine Learning Model Development, Debugging & Troubleshooting, Problem Solving, Team Collaboration.

PROJECTS

Owlpi

[github](#)

Tech Stack: React, Node, Express, Postgres, MongoDB, RabbitMQ, Docker

- Architected a real-time API Monitoring System using **Node.js, Express, and RabbitMQ** to ingest and analyze performance metrics across distributed client applications via asynchronous decoupled workflows
- Engineered a resilient event-driven infrastructure with **Dead Letter Queues** and an exponential backoff strategy (200ms-5s), ensuring zero data loss during broker unavailability or system-wide failures
- Scalable backend featuring a **dual-database schema** (MongoDB/PostgreSQL), **JWT/RBAC** multiple endpoints, utilizing a producer-consumer pattern to allow independent scaling of ingestion & data processing layer.

BigBazar

[github](#)

Tech Stack: React, Node, Express, Postgres, Redis, Pinecone, Cloudinary, Gemini, Stripe

- Developed a high-performance e-commerce architecture featuring secure **JWT** authentication and **Stripe** integration, utilizing **bcrypt** for encrypted data protection within a Node.js/Express framework
- Boosted platform efficiency by integrating **Redis** caching and a **Pinecone/Google AI** vector search engine to deliver semantically-aware product recommendations chatting bot with minimal latency
- Implemented robust backend scaling using **PostgreSQL** and **Cloudinary** for asset management, alongside automated **Nodemailer** workflows and rate-limiting to ensure system reliability

Blogbyte

[github](#)

Tech Stack: React JS, Appwrite (BaaS), Redux Toolkit, React Router, tailwind

- Built a full-stack blog app with authentication, CRUD operations, and image upload
- Integrated Appwrite for backend services (auth, DB, storage) and Redux for state management
- Enhanced responsiveness and UX using component-based design with state management via Redux Toolkit and protected routes for authenticated users.

PAPERS & PUBLICATIONS

ESkinNetBD: Dual-Attention EfficientNet for Transparent Skin Disease Diagnosis

- Constructed a CNN framework using **EfficientNetB2** and **CBAM** to classify dermatological conditions across six categories using the SkinDisNet Bangladeshi dataset
- Mitigated dataset imbalances through **focal loss**, **label smoothing**, and augmentation, attaining a **96.9% macro-F1 score** on evaluation sets
- Integrated **Grad-CAM** and **Grad-CAM++** to generate interpretable visual explanations, enhancing clinical transparency for model-driven decisions

Chlorophyll Detection via CalCOFI Data: Marine Ecosystem Insights

[available](#)

- Architected a predictive model for chlorophyll quantification utilizing an optimized **Random Forest Regressor**, achieving a verified **R² of 0.7889**
- Executed advanced feature engineering and **Optuna-driven tuning**, outperforming ten baseline models in predictive precision for oceanic monitoring

ACTIVITIES AND ACHIEVEMENTS

Dean's List Scholar

Academic Excellence Across all Semesters

American International University-Bangladesh

Jan 2022 – Dec 2025

Unmesh

Dhaka, Bangladesh

Executive Council Member

MAR 2017 – Present

- Spearheaded philanthropic programs for marginalized groups, directing resource distribution during winter and seasonal festivals while managing **fundraising operations** and facilitating direct financial aid to stabilize vulnerable households

RECOMMENDATIONS

Rifat Jahan Azad

CTO, KT Informatik

Technical Lead, Audacity It Solution Ltd
